

Build at least a few more bridges

Thousands of old bridges across the U.S. are awaiting replacement or repairs after inspectors found them in poor condition.

The purpose of this project is to design and construct a bridge from balsa wood that spans 24 inches and holds 25 lbs or more. The weight of bridge by itself may not exceed 1 lbs.

With so many bridges nearing the end of their planned lifespan, it's crucial to find cost-effective bridge maintenance strategies to boost their longevity.

See how America's infrastructure is graded by ASCE. Explore grades, state-by-state data, and solutions for roads, bridges, water, energy, and transit.

Several major bridge construction projects are underway in the United States. From the northern border to the the Volunteer State of Tennessee, Newsweek has compiled a list of some of ...

The eligibility requirements of BUILD allow project sponsors, including state and local governments, counties, Tribal governments, transit agencies, and port authorities, to pursue multi ...

Try to build a strong bridge so that the vehicle can cross the gap without falling down below. The faster and fewer parts used the more stars you will earn in this fun building game.

Over the last five years, the share of bridges in fair condition has continued to grow as the share of structures classified in "poor" or "good" condition declined.

How are bridges built? Let's look at the bridge-building process to learn how these engineering wonders are are created to link us together over water and land.
