

Through our strategic partnerships, we offer IOT solutions, IP security and surveillance solutions, energy management, electrical safety and risk mitigation solutions.

To fulfill standards and customers" requirements regarding the conditions under which cold supply chain products (mainly foods and ...

Simple, fully integrated infrastructure - Racks, precision cooling, monitoring, cable management and power systems designed to work together, saving you time and money on installation and operation. ...

CSafe University offers an enhanced training program to ensure compliance with Good Distribution Practices (GDP) and service provider competence.

Supermarkets that adopt real-time IoT refrigeration monitoring move from firefighting to foresight--saving energy, preventing spoilage, and protecting the trust customers place in every cold ...

In this discussion, we will explore the significance of IoT hardware certification, the key processes involved, the implications of non-compliance, and potential ways to simplify the ...

The present study presented a smart IoT-BC system that connects sensors, actuators, and related cold storage equipment for remote controlling, ...

To fulfill standards and customers" requirements regarding the conditions under which cold supply chain products (mainly foods and pharmaceuticals) are stored (in warehouses) and ...

Get ISO 9001, 22000 & 50001 for cold stores. Expert guide to 2026 energy efficiency, cold chain integrity, and safety requirements.

Get FCC & CE certification for your IoT (Internet of Things) devices. We specialize in FCC & CE compliance for radio frequency devices.

The present study presented a smart IoT-BC system that connects sensors, actuators, and related cold storage equipment for remote controlling, monitoring, and risk alerting to maintain ...

To draft the EU declaration of conformity and obtain CE certification of the products, IoT devices must be subjected to tests and evaluation trials that affirm their compliance with the current directives.

This study addresses this gap by conceptualising a blockchain-enabled architecture that integrates IoT-driven

cold chain monitoring with Ethereum-based smart contracts to automate ...

Cold aisle containment (CAC) ensures that the IT equipment is being cooled within the manufacturers' specifications. Hot spots, like a weak link in a chain, impact the ability to achieve the efficient ...
