

Fives Cryogenics | Energy business line is specialized in the design, manufacturing, installation and maintenance of brazed heat exchangers, cold boxes, and cores-in-drums.

Separate supply and drain boxes allow for numerous installation configurations, ...

Explore HVAC equipment including AHUs, dual duct systems, multi-zone distribution, and VAV box types. Learn about airside economizer operation.

During the installation of a cold storage, the operation of the cold storage distribution box is of great significance. However, most people are not well - versed in its normal operation. Today, let's ...

The Viega ManaBloc is engineered to be a complete water distribution system, allowing you control over every supply line from 1 central location. It also allows ...

Separate supply and drain boxes allow for numerous installation configurations, minimizing solder joints, installation time, leakage risk, and any chance of a burned drainpipe.

A cold restart is defined as restarting flow while the BAHX is cold from prior operations. A warm restart is restarting flow after the BAHX has been warmed to near ambient conditions.

Meyer Tool offers multi-line cryogenic distribution, managing high and low-pressure streams, subcooled return lines, and multiple temperature stages--all within compact, efficient designs.

Shop Plenums & Filter Boxes at HVACDirect for reliable airflow and filter housing solutions. Free shipping and low prices offered.

Get hot water fast without wasting energy with the Viega ...

Get hot water fast without wasting energy with the Viega ManaBloc. This innovative distribution manifold is designed to supply each fixture in a building with its own individual PEX tubing ...

The objective is in revealing the temperature response patterns of concrete box girders under cold climate and insolation conditions, improving the accuracy of the temperature field model, ...

Find local businesses, view maps and get driving directions in Google Maps.

One duct carries cold air, while the other carries hot air. After mixing, the conditioned air is distributed to

various areas of the building through separate ductwork.
