Metrodata offers a variety of solutions to this PBX extension problem, so whether you have one or more PBX trunks circuits to extend over fibre, then Metrodata has a solution for you. A wide variety of fibre ...

The 2 Wire Digital Phone Fiber Link Card system interfaces a single line from a switch or digital PBX over fiber optic cable to a digital telephone that would otherwise be connected through a copper pair.

A typical link consists of an FOM-3941 at the PBX and an FOM-3942 at the telephone with a duplex fiber optic cable between them as shown under "Typical Application".

Two types of voice applications are supported: one, connecting to a PBX for outside telephone service; two, setting up a "hot link" point-to-point connection, e.g. between two work stations, within a LAN.

It converts 2-wire FXS to fiber optics on the telephone side with ring down capability and FXO on the PBX side. Serial data interface options are RS-232, RS-422, TTL and Dry Contact.

Using a pair of these devices, 16 independent telephone lines can be extended over a fiber link. The F-16TEL provides full service for features like caller ID. The converter can be used in service mode, ...
