

Our fiber optic sensor temperature measurement solutions provide enhanced visibility into your process, allowing you to detect problems before major catastrophic events occur.

Leading developer of fiber optic temperature sensing and partial discharge monitoring solutions for switchgear, data centers, energy, and life sciences, delivering critical insights for electrical ...

Not sure which sensor is the right fit? Select up to three sensors to view technical comparison. We offer standard temperature sensors but can also help you with a customized design or a complete ...

This video gives an overview of AE Fluorotic Probes, highlighting their reliable and accurate temperature sensing in tough environments. It covers the Luxtron M-1100 & M-1200 Series System and various ...

The fiber optic temperature sensor system consists of a fiber optic probe and a temperature converter. Our probes include our proprietary materials and processes that helps achieve the highest ...

Fiber optic temperature sensors are immune to the many environmental effects that compromise other measurement technologies, can be embedded and installed in locations traditional temperature ...

With improved temperature stability, these sensors are particularly suited for temperature measurements in large structures and thermal mapping in electrical machines.

Our fiber optic sensors use a Gallium Arsenide (GaAs) crystal at the fiber tip, making them ideal for highly accurate temperature measurements in environments exposed to microwave radiation and ...

Fiber-optic temperature sensors for industrial applications involving harsh environments such as high voltage, electromagnetic interferences, microwaves, and Radio-Frequency energy

Micronor Sensors offers a complete range of fiber optic temperature sensors, probes and interfaces for high precision temperature measurement in challenging environments.
