

Enhance your paper mill's pulp processing capability with our high-performance single effect fiber separator that combines efficient operation with reliable impurity removal. Its robust design and ...

The single-effect fiber separator is a modern equipment for disintegrating, separating and screening fibers in the paper pulping process.

It is a new equipment which is developed for adapting to the needs that high quality of paper pulp is made from waste papers. It has many features, for example, separating the light and heavy ...

Fiber Separator is a key stage in paper making process, which make paper's quality get a new level, ensure customer's satisfaction. Leizhan is a leader and ...

As a manufacturer, we supply pulp equipment fiber separator machine, which can be used in paper mill production line project. It has certification with ISO, CE, etc.

We design our stripping machinery for fiber and corrugated partition strips and pads. You can simultaneously make clean punch configuration slots and "v" slots for easy assembly for your fiber ...

By effectively removing contaminants, the single fiber separator enhances the quality and purity of recycled paper pulp, resulting in finished products with superior strength, smoothness, and printability.

The fiber separator adopts sword-shaped rotor for saving energy. It separates long and short fiber, and also screens pulp by controlling the rate of discharging rejects.

Single effect paper pulp fiber separator machine is the core coarse screening equipment in pulp making process, mainly used to efficiently separate fibers and impurities in pulp and improve pulp purity.

Fiber Separator is a key stage in paper making process, which make paper's quality get a new level, ensure customer's satisfaction. Leizhan is a leader and professional paper machinery with over 35 ...

With 44 years of experience and comprehensive knowledge in paper and pulp industry, LEIZHAN is capable to provide high quality defibering machines and advanced defibering technology for ...
