

Cablofil Wiremesh Cable Tray concept based upon performance, safety and economy; three qualities which make Cablofil Wiremesh Cable Tray system preferred by installers. Cablofil adapts to the most ...

Reliable support systems for cable tray and busbars, designed for electrical and mechanical installations. Available in corrosion-resistant coatings.

Cable trays are systems used for the safe transportation and protection of electrical cables, designed to fit the pathways within buildings and structural installations.

Designed in compliance with ASCE 7 and the International Building Code (IBC), these kits offer multidirectional restraint and meet stringent requirements for life safety and equipment survivability ...

This article discusses the importance of seismic resistance for cable trays, detailing when seismic braces are necessary, the factors that affect seismic resistance, and how to ensure your ...

Eaton's TOLCO seismic bracing solutions help protect people and non-structural components during an earthquake. For over 60 years, the mechanical, electrical, and fire protection trades have relied on ...

It offers helpful video tutorials for our products, such as choosing the right material, the different types of, and working with cable tray, mesh and ladder, general strut use, and managing pipework with ...

We offer a pre-engineered, time-saving solution which braces and secures non-structural equipment within a building to minimize damage from earthquakes or seismic events.

By reinforcing the cable tray structure, it can effectively reduce the dynamic impact caused by earthquakes, ensuring that the cable tray structure and the cables it carries remain securely in place.

These were extremely heavily loaded rod hanger supported cable tray systems (over 1 foot of cable on the tray). The rods were threaded into cast-iron sleeve anchors embedded in the concrete ceiling.
