

Distributed Temperature Sensing (DTS) and Distributed Acoustic Sensing (DAS) systems, using fiber optic sensor cables, are essential for monitoring environmental changes such as landslides, ...

Oil and gas fiber optic solutions from AFL offer improved communications and safety. Sensing and withstanding heat, pressure, moisture, corrosion and vibration.

Many options are available for individual (transmissive) and bifurcated (reflective) cables. These include core diameter, length, jacket type, temperature range, flexibility and a diverse number of sensing tip ...

Our CTI team proudly offers a quality selection of gas sensor cable and wiring solutions designed to meet your specific industrial needs. Browse our three-conductor wire products from the industry ...

Industry-unique Optiq solutions are used for many applications in upstream oil and gas and can be easily integrated with our nonfiber-optic comprehensive measurements, products, and services for ...

With optical fibers used for sensing, our system is non-corrosive and intrinsically safe in explosive atmospheres. It accurately measures the temperature over multiple kilometers every minute and is ...

GASPOF (Gas Sensing using Photoacoustic and Optical Fiber technologies) is the first large-scale project to blend environmental gas monitoring with operational fiber optic networks.

Honeywell leads the global market in the design and manufacture of gas sensors used in personal and fixed life safety systems and emissions monitoring.

With over 40 years of experience in manufacturing high reliability optical fibers, we are proud to offer a wide range of specialty optical fibers that are designed specifically for use in the oil and gas industry.

We provide new solutions specifically for industrial, Oil & Gas, underwater and flooded areas and harsh environments. Prysmian can also offer a complete sensing system including specific fibres, optical ...
