

This portable device utilizes Laser-Induced Breakdown Spectroscopy (LIBS) to deliver quick elemental analysis, benefiting industries like lithium mining, battery production, and recycling.

The world's only handheld that analyzes lithium in rocks, ores, and powders. In use globally for lithium exploration projects, with no travel restrictions or licensing headaches.

The VK-1000G handheld ternary lithium battery spectrum analyzer is designed to detect elements such as Ni (nickel), Co (cobalt), Mn (manganese), and their respective contents.

Until recently, a portable method for determining lithium content in ore and brines was not available. Portable LIBS (SciAps Z-Series) from The XRF Company offers the industry a simple and effective ...

The SciAps Z-901 Lithium LIBS is a handheld Laser-Induced Breakdown Spectroscopy (LIBS) analyzer designed for rapid detection and measurement of lithium in various materials, especially in mining ...

Equal in stature to the SciAps carbon analyzers for the fossil fuel industry, these lithium analyzers are the world's only handheld devices capable of making in-field lithium measurements in rocks, ores, ...

The hand-held XRF spectrometer recommended by Comace can help testers accurately examine each sample of lithium battery in non-destructive conditions, making finished product testing faster and ...

The SciAps Z-901 Lithium LIBS is a handheld Laser-Induced ...

The Handheld LIBS Lithium Analyzer is an advanced spectral analysis tool that integrates laser-induced breakdown technology and spectral analysis methods.

LIBS 910 Handheld LIBS Analyzer for Lithium element Spectrometer for Lithium Ore and Lithium Battery Analysis. Size 255*294*80mm, 2Kg, 4.3" touch screen. | Alibaba

The large-capacity lithium battery pack can be used continuously for a whole day. The instrument has no fragile and vulnerable parts, which is more reliable than traditional fluorescence spectrometers.
