

High-precision customization process for vehicle-mounted fiber optic multiplexers

This is crucial to meet the challenges and complexities through the life of a vehicle of roughly 15 years. OEM are working on 2 approaches (Figure 1) which are different but complementary to each other ...

Great investment is being made into capital equipment to auto-mate fiber production. Process equipment must meet extreme accuracy requirements to satisfy industry requirements.

We design and manufacture fiber optic connectors, fiber optic cable assemblies, and custom fiber optic products for use in harsh environments.

Custom OEM fiber assemblies and optical systems, engineered and manufactured for industrial, medical, and research applications with precision and reliability.

o To enable this level of connectivity, wireless and fiber optic transport should emerge as the dominant topologies (similar to the way wired ethernet dissolved 10-15 years ago)

Hinge Technology develops an EEA communication architecture based on optical modules. This model, customizable according to OEM requirements, utilizes multiple optical modules and area gateways ...

Custom solutions provide support for additional signal formats or unique combinations of standard protocols. Application specific products may be customized to reduce size or cost, optimize ...

Visible light sources are now being of a wavelength division multiplexing (WDM) used in this field, bringing advantages in both technology is promising for realizing further visibility and workability. In ...

-- Automotive fiber optic connection systems should be compatible with circuit board design and assembly requirements. Header lead spacings, lead lengths, and mounting techniques must all be ...

Your assemblies can be customized, from the optical fiber to the output connector, including the type of cladding and coating, the connectors, and the manufacturing ...

With deep expertise in fiber cable structures, connector types, and optical performance, we guide you in selecting the ideal configuration for your network or ...

Among these, AFP stands out as a transformative approach, enabling the precise creation of complex geometries and optimized strength-to-weight ratios in composite materials.

High-precision customization process for vehicle-mounted fiber optic multiplexers

Your assemblies can be customized, from the optical fiber to the output connector, including the type of cladding and coating, the connectors, and the manufacturing materials used.
