

FIBERLIGN®; Cushion Clamp provides excellent protection to OPGW at support points. The combination of the Structural Reinforcing Rods and the elastomer inserts at the ends of the clamp body halves ...

Our RIBE-OPTOFIT® accessories offer the ideal solution for connecting fiber optic overhead cables and terminating the optical signal, and perfectly complement proven RIBE-OPTOFIT® fittings.

Equipped with LC connectors and compatible with both single-mode and multimode FIBREs, the box is designed to ensure consistent and efficient performance. With ...

To ensure that the OPGW cables will operate successfully in a high-voltage network, all aspects associated with the implementation of the technology must be correctly analysed.

PLP transmission, distribution, substation, fiber optic, solar, and EV solutions protect and connect overhead electric power lines and communications networks.

The OPGW Hardware Fittings are instrument used for surge protection of communication and transmission lines. It replaces the earlier PLCC (using waves as the transport medium) with an ...

In a single mode Optical fiber, the fiber core is small enough that only one mode of light can travel through the core at any one time. In a multi-mode fiber, the fiber core is large enough that multiple ...

Explore our range of connector kits for secure and long-lasting OPGW connections.

Choose between single-mode and multi-mode, and dual-core optical cables based on the number of fibers needed, bandwidth requirements, transmission distance, and signal attenuation.

A series of Optical Ground Wire fittings contributes toward connection, protection and stabilisation of power transmission lines. Learn more about them here.
