Multi-VLAN Aggregation Main Switch

Learn what MLAG is, its benefits, and how to configure it step-by-step on PicOS® enterprise switches.

Setting up an MLAG (Multi-Chassis Link Aggregation) between two Extreme XOS core switches involves several steps. After establishing the MLAG, you can connect edge switches, like ...

MLAG (Multi-chassis Link Aggregation Group) implementation in RouterOS allows configuring LACP bonds on two separate devices, while the client device believes to be connected to the same ...

Deploying MLAG removes over-subscription by configuring an MLAG link between two aggregation switches to create a single logical switching instance that utilizes all connections to the switches.

Multi-Chassis Link Aggregation or MLAG is a network technology that allows two or more network switches to appear as a single logical switch for link aggregation, which provides ...

A multi-chassis link aggregation group (MLAG) is a pair of links that terminate on two cooperating switches and appear as an ordinary link aggregation group (LAG). The cooperating ...

MLAG enables a server or switch with a two-port bond, such as a link aggregation group (LAG), EtherChannel, port group or trunk, to connect those ports to different switches and operate as if they ...

MLAG allows two switches to act as one logical device, providing both link-level and device-level redundancy. This article explains how MLAG works, its architecture, and how it ...

ere can be multiple MLAG interfaces between two switches. The maximum number of MLAG interfaces is limited by he maximum number of LAGs supported in the switch mod
