

Pipe trench below the distribution box

The trench must be wide enough to permit proper installation of the pipe and to allow room to assemble joints and tamp backfill around the pipe. The width is governed by size of pipe, type of soil, and type ...

Trench boxes provide a safer work area to install pipe in deep trenches, restricted right-of-ways, or in soils that have insufficient stability. This technical bulletin provides guidelines on how to maximize the ...

The Forklift operator should lift the innermost pipe above the pipe around it sufficiently so the pipes do not touch each other when the inner pipe is being pulled out.

Each utility must be in it's own separate trench. The bottom of the trench must be prepared as a level bed, suitably compacted with sand surrounding the pipe to provide firm support ...

The Trench Box is normally selected for installing utility pipes where ground movement is not critical. The size of the system required depends on maximum trench depth requirements and the ...

Understanding the proper sequence of planning, digging, bedding, and backfilling ensures the utility remains stable and serviceable. The process of constructing a pipe trench begins ...

The Conquip Trench Box is a two sided, simple to assemble, trench lining support system designed to be installed by simply lowering the box into the excavation via a crane.

For larger diameter pipes, thinner steel extension plates may be placed below the bottom of the trench box to allow the box to remain at an elevation above the crown of the pipe.

Unauthorized Excavation: Where excavations are made below indicated elevations under slabs, footings, pipes, structures, or outside maximum trench pay widths, restore to proper elevations ...

For safe and proper construction the groundwater level in the trench should be kept below the pipe invert. This can be accomplished by deep wells, well points or sump pumps placed in the trench.

The bottom of the trench must be level and free from all sharp and/or stone materials which may damage the service pipe. In any ground containing sharp stones, it will be necessary to ...
