

# Relay Protection Tester Development Program

Unfortunately, finding and keeping relay techs is also one of a utility's biggest challenges. That's why we've developed a targeted training program to help you close the skills gap and strengthen and ...

The Hands-On Relay School is a professional development short course that trains protective relay technicians, electrical/power plant technicians, engineers, and protective relay test specialists.

This hands-on course is designed for test technicians and other persons involved in setting, testing and diagnosing microprocessor-based relays that protect generators, generator buses and transformers.

This course provides an overview of test plan concepts and practices, document test creation, relay functions and essential testing software.

At the completion of this course, students will be able to test phase / ground time over current (51) and phase / ground instantaneous over current (50) protection elements on electromechanical and ...

Our online training courses dig deep into the basics that every relay tester should know using video presentations, real-world exercises, and quizzes to make sure you learn the applications.

Do you find protective relay testing frustrating? Our 24/7/365 online protective relay training is designed to help you master relay testing!

Participants are introduced to modern digital protective relays used in North America and learn how relay software, communications, and testing fit into everyday engineering and maintenance workflows.

Students will learn basic relay testing skills; acquire skills required to work with SEL relays, such as using Relay Word bits and relay event reports; and practice acquired skills by working with a phase ...
