

Relay Protection Tester Manufacturers, Factory, Suppliers From China, Welcoming interested businesses to cooperate with us, we look forward to owning the opportunity of working with ...

fully isolated and adjustable AC & DC voltage, current output, short circuit, overload and over-range automatic protection; Auxiliary output: (1) DC:0~220V Amplifier output, short circuit, overload, ...

After data setting, press confirm, the screen will appear the state chart of relay contacts, and the test begin. The variations can change automatically or manually, and the method is similar to AC test.

Relay Protection Tester Manufacturers, Factory, Suppliers From China, Welcoming interested businesses to cooperate with us, we look forward to owning the ...

Protection relay tester which offers all the characteristics and functions needed for protective relay testing, in a manual or automatic mode, designed for maximum efficiency, flexibility and simplicity, ...

Huazheng Electric HZJB-D SINGLE PHASE RELAY TEST is a portable field testing equipment with excellent performance; Elegance and polished appearance with aluminum alloy chassis and PC ...

II. Main Features 1. a full isolation way for adjustable DC voltage, Automatic protection for short circuit, overload and out range. 2.Maximum Output Current:0~150A. 3.Equipped with LCD digital AC/DC volt ...

The secondary defect elimination tester HZJB-1700 is controlled by single chip microcomputer, which is simple in function and convenient to carry. It can be used to test the action value and time of AC relay.

The GDJB-III Single-Phase Relay Protection Tester is ideal for adjusting and testing relay protection devices in high and low-voltage power systems.

General Information GDJB-III type Single Phase Relay Protection Test Set is the updated calibration device for relay testing. It shows clear data,operation is easy. Features 1. Three-way output Main ...

It delivers flexible voltage and current outputs with excellent accuracy and stability, supporting a wide range of test scenarios including overcurrent, impedance, and transient fault simulations.
