

Schematic diagram of the external structure of the optical distribution box

In different types of optical cable distribution boxes, various shapes of optical cable distribution frames and splicing trays can be seen, but the functions are the same.

1. OVERVIEW equipment for the realization of optical fiber connection. Mainly used in the junction point between the optical transport networks and the optical transmission equipment, or between the optical ...

It brings together fiber splicing, patching, and cable routing in a single structure, while shielding sensitive connectors and splices from mechanical stress or contamination.

ODF has the functions of fiber optic cable fixing, protection, termination, and line adjustment. It can be individually assembled into a fiber optic distribution frame, but also with digital ...

The fiber optic distribution frame (ODF) applies to central offices and optical cross-connection points of optical fiber access network projects.

In the complex architecture of fiber optic networks, the Optical Distribution Frame (ODF) serves as the linchpin for organizing, protecting, and distributing optical signals.

Choose from two-dimensional and isometric product drawings in PDF, DXF, VSS formats, and Building Information Modeling (BIM) Objects.

In modern data centers and enterprise networks, Optical Distribution Frames (ODF) serve as the backbone for organizing, terminating, and managing fiber optic connections.
