

Selection Method for Adjustable Beam Attenuators

Thorlabs" Beam Attenuators use a twofold reflection on two stacked prisms for attenuation of high-power beams up to 200 W (uncoated) or 50 W (AR coated). The ATT30 Series use a pair of UVFS prisms ...

These adjustable components eliminate the need for multiple fixed attenuators, streamlining test configurations for satellite communications, radar calibration, and 5G/6G system ...

Explore the fundamental principles of fiber optic attenuators and gain insights into choosing the right type of optical attenuator to meet network requirements.

The selection of laser attenuators depends on five key parameters: ...

The selection of laser attenuators depends on five key parameters: power handling capacity, wavelength range, attenuation range, response time, and environmental requirements.

The Arcoptix variable attenuator has the unique property to be adjusted in milliseconds with a simple square wave bias between 0 and 10V and can so be easily computer controlled via the ARCOptix LC ...

In some cases, a fixed degree of attenuation (e.g., 10 decibels) is sufficient, whereas in other cases one needs a variable optical attenuator (VOA), where the degree of attenuation can be adjusted, for ...

The intensity ratio of these two beams is continuously tuned by rotating the waveplate. Pure p-polarization should be selected for maximum transmission, and pure s-polarization - for maximum ...

The prism attenuator can be used up to intensities of 2GW/cm² for pulse laser and 20kW/cm² for cw laser. The prism attenuator can be combined with neutral density filters for final power adjustment. ...

Note: This guide is a product overview, not exact electrical specification. Please refer to product series specification for electrical characteristics and orderable part number.

This accessory selection guide helps you tailor your UV-Vis-NIR setup to match your application needs. A catalog and ordering guide showing a wide range of Agilent atomic absorption, ICP-MS, ICP-OES, ...
