

Dive into the research topics of "Dielectric liquid-based self-operating switch triboelectric nanogenerator for current amplification via regulating air breakdown".

The LineBOSS(TM) Sidebreak switch is the most robust, yet elegant sidebreak switch in the market today. Every LineBOSS(TM) component brings meaningful operator benefits for years to come.

In this study, a dielectric liquid-based self-operating switch triboelectric nanogenerator (DLSS-TENG) was established, in which the movement of a dielectric liquid functions as a self ...

The XD|GE disconnect switch facilities are ISO certified and have industry leading positions in quality, innovation, and field reliability with more than 58 years of experience.

The movement of the dielectric material plate regulates the air breakdown by acting as a self-operating switch, which can enhance the current output of the TENG.

Inspired by the physiological behavior of earthworms, an innovative ultra-durable sliding-freestanding triboelectric nanogenerator (SF-TENG) is designed, featuring a self-replenishing ...

The continuous rotation enables a self-operating switch effect due to the liquid motion, facilitating more sustained electrical generation compared to intermittent motion in plate-type designs .

Pilot-operated Universal Regulators Pressure, differential pressure, flow rate, temperature or combined regulators, optionally with additional electric actuator Type 2334

In this experiment, the discharge teeth manufactured by printed circuit board (PCB) technology overcome the shortcomings of hand-made spark switches, and can accurately control the discharge ...

Triboelectric nanogenerator (TENG), an emerging new technology, is capable of easily converting energy from surrounding environment into electricity, thus TENG has tremendous application ...

The continuous rotation enables a self-operating switch effect due to the liquid motion, facilitating more sustained electrical generation compared to intermittent ...
