

# Should space be left for the distribution box

That box must stay completely clear--no shelves, pipes, or storage--so an electrician can work safely without risk of contact with live parts or ...

Leave enough space around the box for air to flow and for future check-ups. Good airflow helps prevent overheating, and clear space makes it easier to work on the box later.

The panel should be accessible and have enough room in front of it so that an electrician can open the door and work safely. This area needs to remain clear at all times. With that being said, there ...

Side clearance: There should be a minimum of 30 inches of clearance from the sides of all electrical equipment, but in no case less than the width of the equipment itself. This is referred to as the side-to ...

No, the Code requires a minimum working space of 1 m (39") with secure footing be provided and maintained in front of electrical equipment such as panelboards (Rule 2-308 1)).

The space must be at least 30 inches wide, or the width of the panel, whichever is greater. The NEC does not require the panel to be centered within the 30-inch width.

The 36-inch depth is intended to give a worker enough space to quickly recoil or step away from the panel should an arc flash occur. This distance helps mitigate the effects of the thermal energy and ...
