

Should the router in Ukraine be replaced

Almost two years on, the country is still stuck rebuilding its telecoms infrastructure. Vodafone Ukraine estimates that the war has cost the company in the region of 2 billion hryvnia ...

The FCC just banned any new Wi-Fi routers made outside of the U.S., but it's more complicated than you may think. Here's what to know before you buy your next router.

Last week, the United States Federal Communications Commission (FCC) took the drastic step of banning the future import of consumer-grade Wi-Fi routers manufactured overseas.

So, if your router is functioning, there's no reason to rush out and buy a new one. This will likely become more of a problem down the line, as router makers develop next-gen devices.

As part of the operation, more than 100 servers were blocked and hundreds of routers in Ukraine were taken out of Russian control.

Every piece of Western equipment that reaches Russian forces makes the war harder for Ukraine to win. And when it's happening through U.S. companies--companies that already knew ...

The FBI is warning about the dangers of old Wi-Fi routers that do not receive security updates and may be vulnerable to hacker attacks. It is recommended to replace outdated models ...

The FCC just banned new foreign-made routers citing national security. We break down what it really means, who is affected, and what existing and prospective router buyers should do now.

The SBU urged people to inspect their router settings, update firmware, change passwords and disable remote administration unless it is necessary. Where a device is no longer supported by ...

The FCC announced a ban on routers made outside the US, but it could backfire. Here's the real risk, and what you can do about it.
