

Switch Port Mapper lets you see exactly what's connected to every port on your switches or hubs without manual tracing. It remotely discovers devices connected to switch ports and maps them to ...

Learn how to use network hardware diagnostics tools like ping, cable tester, port scanner, switch configuration, SNMP, and syslog to troubleshoot and fix switch ...

Use a tool like LinkSprinter to test port connectivity and availability of network services. For advanced diagnostics, use LinkRunner to analyze end-to-end paths and locate switch ports.

With TDR, you can check the status of copper cables on the 48-port 10/100/1000 BASE-T modules for the Catalyst 9400 Series Switch. TDR detects a cable fault by sending a signal through the cable and ...

Remember to perform a physical inspection, check the link light, run a cable test, check the port configuration, test the port with a known-good device, and run a diagnostic test to identify ...

Cisco switch verification commands are simple tools that help you check if your switch is working. They let you see if the ports are up, if the VLANs are correct, and if the switch is healthy.

When you are troubleshooting a suspected layer 1 or layer 2 problem, check the LED status indicators on the NIC at one end and the switch/router port at the other.

This document describes how to determine why a port or interface experiences problems.

Learn how to use network hardware diagnostics tools like ping, cable tester, port scanner, switch configuration, SNMP, and syslog to troubleshoot and fix switch port connectivity issues.

A comprehensive switch troubleshooting from the physical layer to the data link layer to the network layer to find out why your network switch is not working.

Learn how switch port monitoring enhances network performance, security, and troubleshooting. Explore top tools for real-time insights.
