

The electrical port of the media converter is not compatible with the network device interface, or there is a duplex mode mismatch between the interfaces at both ends of the connection.

If the next port to die is Port #14 and you have the WAN uplink in Port #1, then you can probably safely assume that the Netgear switch is simply failing. However, if the next port to die is Port #1 with the ...

Learn about how to troubleshoot information for specific problems related to interfaces on EX2300 switches. The uplink ports 4 and 5 (see Figure 1) do not support the speeds 10-Mbps and 100-Mbps. ...

You're seeing that error, most probably because you've configured the portchannel using &quot; on &quot; mode; what happens is that the side where portchannel is configured considers those physical ...

I'm having trouble configuring this model switch regarding the uplink port and would like your input on this matter. We're working with the default VLAN (VLAN1) for configuring the ipv4 settings.

I sent the request to Xfinity and somehow got a message today stating that the problem is resolved. I just run another diagnosis and the upstream problem is resolved and now there's 32 ...

When an uplink port goes down, UFD enables the switch to auto-disable the specific downlinks connected to the NICs. This allows the NIC teaming software to detect link failure on the primary NIC ...

In this blog, we will explore some of the common problems associated with fiber optic converter to Ethernet and discuss potential solutions to mitigate these challenges. 1. Compatibility ...

The fiber uplink worked consistently without any hiccups until recently. Now all of a sudden the fiber uplink intermittently goes down. We purchased some media converters (TP-Link ...

While Ethernet splitters are generally reliable, users often encounter several issues. Below, we outline the most common problems and how to fix them. 1. Slow Network Speeds. One of ...
