Explore the importance of fire-resistant cable trays in high-risk environments. Learn about the best materials and practices to ensure maximum safety and performance in fire-sensitive areas.

We provide a variety of options that include different materials and finishes, such as powder-coated aluminum, galvanized steel, and fiberglass with intumescent coatings, all designed to improve fire ...

Cable trays are intended for the construction of fire-resistant cable paths with surface cable laying. Cable paths are constructed as standard or lightweight cable paths.

Cable tray installed in a hazardous location must contain only those cables that are appropriate for this type of environment as defined in Chapter 5 of the NEC.

For consistency with the corrosion resistance of accessories and cable trays, and minimise corrosion breaking lines due to the galvanic couple, we recommend the following assemblies:
